Bell Fibe Internet & TV Plans

1. Product Overview: Bell Fibe Internet & TV services provide high-speed, fibre-powered connectivity designed to deliver reliable performance, ultra-fast speeds, and seamless digital experiences for households and businesses. These plans include unlimited monthly internet usage, ensuring customers can browse, stream, and work without worrying about data limits. With equal download and upload speeds (where fibre is available), users benefit from enhanced performance for video conferencing, gaming, and cloud-based applications. The service is powered by the advanced Giga Hub modem featuring Wi-Fi 7 technology, which ensures faster speeds, better device handling, and wider coverage throughout the home.

2. Fibe Internet Plans – 2-Year Term: Bell Fibe 2-year term internet plans are designed to offer cost savings through promotional monthly credits applied over a 24-month period. These credits significantly reduce the effective monthly cost during the contract duration, after which pricing reverts to the standard rate. All plans include unlimited usage and fibre-powered symmetrical speeds where available. The Fibe 50 plan offers download and upload speeds of up to 50 Mbps with unlimited usage. Customers receive a monthly credit of $25, resulting in an effective price of $60 per month, compared to the regular price of $85 per month. The Fibe 150 plan provides speeds of up to 150 Mbps for both download and upload. Customers receive a $20 monthly credit, reducing the cost to $75 per month from the regular $95 per month. The Fibe 300 plan delivers speeds of up to 300 Mbps with unlimited usage. With a $20 monthly credit, customers pay $90 per month instead of the regular $110 per month. The Fibe 500 plan offers speeds of up to 500 Mbps with unlimited usage. Customers receive a $20 credit, bringing the monthly cost to approximately $100 compared to the regular $120 per month. Gigabit Fibe 1.5 provides download speeds of up to 1.5 Gbps and upload speeds of up to 940 Mbps. With a $25 monthly credit, customers pay approximately $110 per month instead of $135 per month. Gigabit Fibe 3.0 offers speeds of up to 3 Gbps for both download and upload. Customers receive a $25 credit, reducing the price to approximately $120 per month compared to the regular $145 per month. Gigabit Fibe 8.0 delivers ultra-fast speeds of up to 8 Gbps with unlimited usage. Customers receive a $30 monthly credit, bringing the effective price to approximately $130 per month compared to the regular $160 per month.

3. Fibe Internet Plans – Month-to-Month: Bell also offers flexible month-to-month internet plans for customers who prefer not to commit to a contract. These plans provide the same speeds and unlimited usage benefits but are priced at standard rates without promotional credits. The Fibe 50 plan is available at approximately $75 per month with speeds of 50 Mbps. The Fibe 150 plan is priced at approximately $90 per month, offering speeds of 150 Mbps. The Fibe 300 plan costs around $105 per month with speeds of 300 Mbps. The Fibe 500 plan is priced at about $115 per month with speeds of 500 Mbps. Gigabit Fibe 1.5 is available at approximately $125 per month, providing 1.5 Gbps download and 940 Mbps upload speeds. Gigabit Fibe 3.0 is priced at about $135 per month with speeds up to 3 Gbps, while Gigabit Fibe 8.0 is available at approximately $145 per month, offering speeds up to 8 Gbps. These plans are ideal for customers seeking flexibility and no long-term commitment.

4. Discover Great Offers – Bundles: Bell provides bundled packages combining Internet and TV services to offer greater value and enhanced entertainment options. Bundle 1 includes Starter TV with over 25 channels such as CTV, CBC, Global, and City, along with more than 15 additional complimentary channels. This bundle also includes Fibe 150 internet with unlimited usage and Crave Standard with Ads. The 2-year promotional price is $100 per month after a $20 credit, while the regular price is $120 per month. The month-to-month price is approximately $120 per month. Bundle 2 includes Starter TV with Pick 10 channels along with TSN and Sportsnet. Available channels include TSN, Sportsnet, CP24, USA Network, History, W Network, CTV Sci-Fi, Home Network, and Food Network. This bundle includes Fibe 500 internet and Crave Standard with Ads. The 2-year promotional price is $155 per month after a $20 credit, while the regular price is $175 per month. Month-to-month pricing is approximately $175 per month. Bundle 3 includes Better TV with over 80 channels, including TSN, Sportsnet, CNN, Showcase, CTV News Network, and CBC News Network. It also includes Gigabit Fibe 1.5 internet and Crave Standard with Ads. The 2-year promotional price is $180 per month after a $25 credit, while the regular price is $205 per month. Month-to-month pricing is approximately $200 per month. Additionally, a Streaming Bundle is available, which includes Fibe 50 internet along with Crave, Netflix, and Disney+, starting at approximately $82 per month.

5. Features Included with All TV & Internet Bundles: All Bell bundles include Crave Standard with Ads, which provides access to live events, HBO series, blockbuster movies, and exclusive originals. The Cloud PVR feature allows customers to record multiple programs simultaneously and store up to 320 hours of content for up to 60 days. Customers can also enjoy on-the-go viewing through mobile applications, enabling them to download and watch content anywhere. The inclusion of the Giga Hub Wi-Fi 7 modem ensures superior internet speeds, strong signal coverage, and stable connectivity across multiple devices.

6. Additional Details: Pricing without promotional credits applies before the first billing cycle or if services are canceled mid-cycle. Prices may increase after the promotional term ends. Any modifications to services, such as plan changes or bundle adjustments, may result in the removal of applied credits. Bell services are compatible with a wide range of devices, including Samsung Smart TVs, LG TVs, Roku devices, Apple TV, Amazon Fire TV, Google TV, and Bell Streamer.

7. Offer Details: Bell offers $0 installation under promotional conditions. However, a $150 installation fee may apply if professional installation is requested unnecessarily. Maximum internet speeds can typically be achieved using wired connections or optimized mixed connections. Streaming services such as Netflix and Disney+ require customers to be at least 18 years old, and subscriptions must be managed separately through individual accounts.

8. Customer Support: Bell provides comprehensive customer support through multiple channels. Customers can contact support by calling 1-866-845-2998, accessing live chat through the official website, or visiting a Bell retail store for in-person assistance. Appointments can also be scheduled for service-related support.

9. Enhanced Performance & Speed Overview: Bell Pure Fibre delivers one of the fastest internet experiences in Canada by providing 100% fibre-optic connectivity directly to your home. This advanced infrastructure enables combined download and upload speeds of up to 6 Gbps, which is significantly faster than traditional cable internet that typically offers total speeds of around 2.2 Gbps. With fibre technology, users can experience up to 1.5 times faster download speeds and up to 15 times faster upload speeds compared to cable connections. These high-performance capabilities ensure seamless streaming, ultra-fast downloads, lag-free online gaming, and superior video conferencing quality. The symmetrical speed advantage of fibre internet, combined with Bell's cutting-edge network, makes it ideal for modern households with multiple connected devices and high data consumption needs.

10.Fibre vs Cable Speed Comparison: Bell Pure Fibre Internet delivers a significant performance advantage over traditional cable internet by providing symmetrical high-speed connectivity. For instance, Bell Pure Fibre can offer download speeds of up to 3 Gbps and matching upload speeds of up to 3 Gbps, ensuring a seamless and balanced internet experience. In contrast, cable internet typically provides download speeds of around 2 Gbps but much lower upload speeds of approximately 0.2 Gbps. This major difference in upload capability makes fibre internet far more efficient for modern digital activities such as video conferencing, cloud storage, content creation, and large file transfers. Additionally, fibre connections are more stable and less affected by network congestion compared to cable, which often relies on shared bandwidth within a neighbourhood. Overall, Bell Pure Fibre provides a faster, more reliable, and future-ready internet solution, making it ideal for households and businesses with high data usage and multiple connected devices.

11.Most Awarded Internet Service Provider: Bell Pure Fibre Internet has established itself as one of the most recognized and awarded internet service providers in Canada. For three consecutive years, it has been awarded the title of the fastest internet in Canada based on Ookla® Speed test Intelligence® data, highlighting its superior speed and performance. In addition to this, Bell has also received recognition from Nerf as the number one provider for streaming performance, ensuring smooth and uninterrupted viewing experiences for customers. Furthermore, Brand spark has recognized Bell as the most trusted internet service provider, reflecting strong customer confidence and satisfaction. These combined achievements position Bell Pure Fibre as a leader in the industry, offering reliable, high-speed connectivity backed by consistent performance and trusted service quality.

12.Enhance Your Package with Add-ons: **Bell Fibe TV allows customers to enhance their entertainment experience by adding extra channels and premium add-ons tailored to their preferences. Customers can choose from a wide range of categories, including movies and series, sports, international channels, and other specialty add-ons. One of the most popular options is Crave Premium, which provides access to ad-free HBO series, the latest blockbuster movies, and exclusive Crave Originals. While Crave Standard with Ads is already included in select TV and Internet bundles, customers can upgrade to Crave Premium for an additional cost of approximately $10 per month. Another premium option is Hollywood Suite, which offers a curated collection of classic and modern movies across dedicated channels such as Hollywood Suite 70s, 80s & 90s, 2000s, and 2010s, available for around $6 per month, often with promotional credits. Additionally, the Super Channel package delivers a diverse mix of movies, original series, sports content, and on-demand entertainment across multiple channels like Fuse, Heart & Home, Vault, and Quest, typically priced at around $15 per month with promotional offers available.Beyond these packages, customers can also select individual channels based on their interests, with options such as STARZ, Kids Suite, Sundance Now, Shudder, Acorn TV, and others available at varying monthly prices. These flexible add-on options allow users to customize their TV experience, ensuring access to premium content, international programming, and niche entertainment tailored to their viewing preferences.**

13.Wireless (Rural) Home Internet Plans with Pricing: Bell Wireless Home Internet is designed to deliver reliable internet connectivity in rural and remote areas where fibre or cable services may not be available. This service works by installing a small outdoor antenna that connects your home to Bell's wireless broadband network, while an indoor modem (Home Hub 3000) distributes Wi-Fi across your devices. The service supports everyday online activities such as browsing, streaming, video calls, and light gaming, making it a practical solution for households outside urban coverage areas.

Bell currently offers two primary wireless home internet plans. The Wireless Home Internet 25 plan provides download speeds of up to 25 Mbps and upload speeds of up to 5 Mbps. The standard price for this plan is approximately $81.00 per month, with promotional discounts such as a $10/month credit and $15/month credit for 2 years, reducing the effective cost to around $56.00 per month on a 2-year term.

The Wireless Home Internet 50 plan offers faster speeds, with download speeds of up to 50 Mbps and upload speeds of up to 10 Mbps. The regular price is approximately $91.00 per month, but with similar promotional credits, the effective price is reduced to around $66.00 per month for a 2-year term.

Both plans include unlimited usage, with up to 600 GB of data at maximum speeds, after which speeds may be reduced (typically up to 10 Mbps download and 2 Mbps upload for the 25 plan), but no additional usage charges apply. The plans also include Wi-Fi equipment at no extra cost, and customers can enhance coverage by adding Wi-Fi pods for approximately $5 per month per pod.

Bell also offers flexible pricing options, including month-to-month plans (higher cost without credits) and 2-year term plans that provide significant monthly savings through promotional credits. Installation may include a professional setup fee of approximately $60–$80, depending on the service requirements, though promotional offers may waive this cost in some cases.

Overall, Bell Wireless Home Internet provides an affordable and flexible solution for rural users, with pricing typically ranging from $56 to $66 per month (with promotions) or $81 to $91 per month (standard pricing), depending on the selected plan and contract terms. It ensures consistent connectivity, easy installation, and reliable performance for households in areas with limited wired internet infrastructure.

14.Bell Pure Fibre Internet & Wi-Fi Experience : Bell Pure Fibre Internet offers a powerful and advanced home internet experience built on 100% fibre-optic technology, delivering some of the fastest and most reliable speeds available. With plans starting from approximately $60 per month on a 2-year term, customers can enjoy high-speed connectivity designed to support modern digital lifestyles. The service is powered by cutting-edge Wi-Fi 7 technology, ensuring faster speeds, lower latency, and improved performance across multiple connected devices. Bell's fibre network is capable of delivering ultra-fast download and upload speeds of up to 8 Gbps, providing seamless streaming, gaming, video conferencing, and large file transfers.

In addition to speed, Bell focuses on delivering strong and consistent coverage throughout the home. With the help of advanced equipment and optional Wi-Fi 6E pods, users can achieve wall-to-wall coverage, eliminate dead zones and ensuring stable connectivity in every room. The included home Wi-Fi system is designed to automatically optimize network performance using cloud-based technology, ensuring the best possible speeds and signal strength at all times.

Bell also enhances user control and convenience through its easy-to-use mobile app, allowing customers to manage their home network efficiently. Users can pause internet access for specific devices, share Wi-Fi credentials securely with guests, monitor connected devices, and run speed tests to check network performance. These features provide greater control, security, and visibility over home internet usage.

Overall, Bell Pure Fibre Internet combines high-speed performance, advanced Wi-Fi technology, full-home coverage, and smart management tools to deliver a complete and reliable internet solution for households with multiple users and high data demands.

15.Wall-to-Wall Wi-Fi Coverage & Smart Network: Bell enhances the home internet experience by providing wall-to-wall Wi-Fi coverage through advanced Wi-Fi pods that work seamlessly with its Giga Hub modem. These Wi-Fi pods are designed to eliminate dead zones and extend strong, reliable connectivity to every room in the house. By creating a mesh network, the pods ensure that users receive consistent speeds and uninterrupted performance, regardless of where they are in the home. This is particularly beneficial in larger homes, multi-floor properties, or areas where signal strength may typically weaken due to walls or distance from the main modem.

In addition to extended coverage, Bell's smart network technology continuously optimizes Wi-Fi performance using cloud-based intelligence. This system automatically selects the strongest signal and adjusts connectivity as users move around the home, ensuring the fastest possible speeds at all times. The combination of Wi-Fi pods and intelligent network management provides a seamless and powerful internet experience for households with multiple connected devices, high bandwidth usage, and varying connectivity needs.

Wi-Fi pods are especially useful in environments where multiple devices are connected simultaneously, such as households with smart TVs, smartphones, laptops, and gaming consoles. They also help improve performance in areas prone to signal interference, such as apartments or densely populated neighborhoods where multiple wireless networks overlap. Overall, Bell's wall-to-wall Wi-Fi solution ensures reliable, high-speed connectivity throughout the home, delivering a smooth and uninterrupted online experience for all users.

16.Streaming Services : Bell provides convenient access to popular streaming services such as Crave, Netflix, and Disney+, but certain eligibility conditions apply. To purchase streaming services through Bell, customers must either be existing subscribers of Bell Internet, Mobility, TV, or Home phone services, or they must subscribe to one of these services along with their streaming package. Once the subscription is completed, the streaming services are activated immediately, and any associated charges begin right away.

For customers who already subscribe to streaming platforms directly or through another provider, Bell offers simple activation and linking options. Users can connect their existing accounts to their Bell subscription, ensuring a seamless transition without losing their preferences or watch history. In cases where a customer already has a subscription through another Bell service, such as Bell Mobility or TV, they can easily activate the streaming service through their Bell account without duplication.

If a duplicate subscription occurs, customers may need to manage or cancel one of the subscriptions to avoid being billed twice. Bell also provides guidance to help users identify and resolve duplicate subscriptions efficiently. Additionally, if customers have existing bundled subscriptions, such as Crave with STARZ or TSN, these may be impacted when switching to a Bell subscription, and users are advised to review their current plans before making changes.

Customers can explore the full list of features, content, and benefits included in their streaming subscriptions through Bell's platform, ensuring they understand what is included in each package. Overall, Bell simplifies the process of accessing and managing streaming services while providing flexibility, convenience, and centralized billing for a better user experience.

17.Internet and TV Promotions : Bell offers a range of attractive Internet and TV promotions designed to provide high-speed connectivity and entertainment at competitive prices. One of the popular offers is the Fibe 50 Internet plan, which delivers download and upload speeds of up to 50 Mbps along with unlimited usage and Wi-Fi 6E technology included. This plan is available for approximately $60 per month with a 2-year term, after applying a promotional credit of $25 per month for 2 years, compared to the regular price of around $85 per month. Customers can easily check availability and place orders online or through Bell's customer support.

For customers seeking both internet and television services, Bell provides bundled options such as the Fibe 150 Internet + Fibe TV package. This plan offers speeds of up to 150 Mbps, unlimited usage, and includes access to over 25 popular TV channels such as CBC, CTV, and Global, along with a Fibe TV Box and Cloud PVR functionality. The promotional price for this bundle is approximately $100 per month with a 2-year term, after a $20 monthly credit, compared to the standard price of $120 per month. Installation may be included at no additional cost during promotional periods.

Bell also offers a Fibe Internet + Streaming bundle, which combines high-speed Pure Fibre Internet with popular streaming services such as Crave, Netflix, and Disney+. This package allows customers to save over 20% compared to subscribing separately and is available starting at approximately $82 per month with a 2-year term. This bundle provides a convenient and cost-effective way to access premium entertainment content along with fast and reliable internet.

In addition to these plans, Bell provides several added benefits, including unlimited internet usage options, access to a high-quality TV viewing app for streaming content across devices, and the MyBell app for managing services easily. Customers also benefit from professional installation services available seven days a week, along with real-time updates on technician arrival. Overall, Bell's promotional offers deliver a combination of affordability, performance, and convenience, making them an attractive choice for customers looking to upgrade their home internet and entertainment services.

18.Internet Speed Disclaimer: All internet speeds advertised by Bell are "up to" maximum speeds and may vary based on factors such as device capability, number of connected devices, Wi-Fi signal strength, network congestion, and whether the connection is wired or wireless. Actual speeds experienced by users may be lower than the maximum advertised speeds, especially over Wi-Fi connections.

19.TV Availability Disclaimer: Channel availability, content, and features may vary by region and subscription package. Some channels, including specialty and international channels, may only be available in select areas or require additional subscriptions. Access to certain features such as Cloud PVR and on-demand content depends on the selected plan and compatible equipment.

20. Streaming Control Disclaimer: Streaming services such as Crave, Netflix, and Disney+ are operated by their respective providers, and content availability, features, and subscription terms are controlled independently of Bell. Bell provides access and billing integration but does not control the content libraries or service changes made by these platforms.

21.Bundle Dependency Condition: Promotional bundle pricing is dependent on maintaining all included services within the bundle. If any service, such as Internet, TV, or Streaming, is removed or modified, the promotional pricing and credits associated with the bundle may no longer apply, and standard pricing will be charged.

22. Streaming Quality Requirement : Streaming quality, including HD and 4K content, depends on the customer's internet speed and network performance. Higher-quality streaming requires higher bandwidth, and performance may vary based on the number of connected devices and network conditions.

23.Service Availability Condition : Bell Internet and Fibe TV services are subject to availability based on the customer's location and network infrastructure. Pure Fibre services are only available in select areas where fibre-optic networks have been deployed, while Wireless Home Internet is offered in rural and remote regions depending on coverage and line-of-sight conditions. Customers must verify service availability before subscribing, as speeds, features, and plan options may vary by location.

24. **Equipment & Device Requirement :** Bell Internet and TV services require compatible equipment, including a Bell modem (such as the Giga Hub or Home Hub) and Fibe TV box for television services. Performance may vary depending on the quality and capability of connected devices. For optimal experience, Bell recommends using updated devices and, where possible, wired connections for maximum speed and stability. Additional equipment such as Wi-Fi pods may be required to extend coverage in larger homes.

25.**Contract & Cancellation Policy :** Bell Internet, TV, and Streaming services may be offered under both month-to-month and 2-year term agreements. Promotional pricing is generally applicable only during the contract period, and once the term ends, standard pricing applies. If a customer cancels, modifies, or downgrades any service before the completion of the term, promotional credits and bundle discounts may be removed. This may result in an increase in the monthly cost. Customers are advised to review contract terms carefully before making changes to their services.

26. **Trust Bell Pure Fibre:** Bell Pure Fibre delivers an advanced internet experience built on end-to-end fibre-optic technology, ensuring that the connection runs directly from the network to your home without relying on older infrastructure like copper or coaxial cables. This modern approach enables significantly faster download and upload speeds, making it ideal for high-demand activities such as streaming, gaming, and remote work. In addition to speed, it offers proven reliability, as fibre connections are more durable and less susceptible to interference from weather or environmental conditions, providing consistent and stable performance. Furthermore, the technology supports greater bandwidth capacity, reducing congestion and signal degradation that are common with legacy systems, allowing users to handle large volumes of data seamlessly and efficiently.

Save When You Bundle with Bell: Bell offers attractive savings when you bundle popular streaming services together, making entertainment more affordable and convenient. With the basic bundle that includes Crave, Netflix, and Disney+, you can access Crave Standard with Ads for $11.99 per month, Netflix Standard with Ads for $7.99 per month, and Disney+ Standard with Ads for $8.99 per month. After applying a bundle credit of $6.97 per month, the total bundle price comes to just $22 per month, giving you a savings of 24%.

For those seeking a more premium experience, the premium bundle includes Crave Premium at $22 per month, Netflix Premium at $23.99 per month, and Disney+ Premium at $16.99 per month. With a higher bundle credit of $12.98 per month, the total cost is reduced to $50 per month, allowing you to save 21% while enjoying enhanced features and content across all platforms. Customers who already subscribe to streaming services such as Crave, Netflix, or Disney+ through another TV provider may need to take additional steps when switching to a Bell subscription. In such cases, users are typically required to either cancel their existing subscription with the previous provider or wait until the billing cycle ends before activating the service through Bell. This ensures there is no overlap in billing and avoids duplicate charges. Once eligible, customers can activate their streaming service through their Bell account and link it using their existing login credentials to retain their watch history and preferences.

For customers who already have a Crave subscription through a TV provider, activation through Bell may require unlinking the existing provider account and reactivating the service under Bell billing. The exact steps may vary depending on the original provider, but generally involve logging into the Crave account, updating the subscription provider, and confirming activation via Bell. Similarly, if a customer already subscribes to Crave through Bell Mobility, they can activate the service seamlessly by logging into their Bell account and confirming the subscription without needing to create a new account, ensuring continuity of service.

To identify duplicate subscriptions for Crave, Netflix, or Disney+, customers should review their billing statements and account subscriptions across all platforms. This includes checking their Bell bill, credit card statements, and individual streaming service account settings. If the same service appears in multiple places, it indicates a duplicate subscription. In such cases, customers should cancel one of the subscriptions—preferably the non-Bell subscription if they wish to consolidate billing—before the next billing cycle to avoid additional charges.

If customers currently have bundled subscriptions such as Crave with STARZ or Crave with TSN, subscribing to Crave through Bell may impact these add-ons. In most cases, the existing bundle may be replaced by the new Bell subscription, and certain add-ons may no longer be included automatically. Customers may need to re-subscribe to specific add-ons separately through Bell if they wish to continue accessing that content. It is recommended to carefully review current subscriptions and included features before making any changes.

Customers can learn what is included in their Crave, Netflix, and Disney+ subscriptions by accessing their account details through the MyBell app or the Bell website. These platforms provide a clear overview of active subscriptions, billing details, and included features. Additionally, users can visit the official websites or apps of each streaming service to explore content libraries, plan features, and available upgrades. This helps customers fully understand their subscription benefits and manage their services effectively.

Streaming Bundle Offers : Bell offers attractive streaming bundle options that combine popular platforms such as Crave, Netflix, and Disney+ into a single, cost-effective package, allowing customers to save up to 25% per month compared to subscribing individually. These bundles are available in different tiers to suit varying entertainment needs. The **Basic streaming bundle** is priced at approximately **$22 per month** and includes ad-supported streaming, the ability to stream on up to two devices simultaneously, and video quality of up to 1080p. This option is ideal for individuals or smaller households looking for affordable access to popular content.

For customers seeking a more premium entertainment experience, Bell offers the **Premium streaming bundle** at approximately **$50 per month**. This plan includes ad-free streaming, the ability to stream on up to four devices at the same time, and support for up to 4K video quality. Additionally, users can download content on multiple devices and enjoy access to live channels where available. These bundles are typically available to existing Bell customers or those subscribing to Bell services, and they provide a convenient way to manage multiple streaming platforms under a single billing system. Overall, Bell's streaming bundles deliver flexibility, value, and a comprehensive entertainment experience tailored to modern viewing preferences.

Additional Streaming Bundle Options : Bell offers a variety of flexible streaming bundle options that allow customers to customize their entertainment experience by combining popular platforms such as Crave, Netflix, and Disney+. These bundles are designed to provide cost savings while offering access to premium content across multiple devices. For customers looking for a basic and affordable option, Bell provides bundles such as **Crave and Netflix – Basic**, priced at approximately **$16.75 per month**, and **Crave and Disney+ – Basic**, available at around **$15.75 per month**. These basic plans include ad-supported streaming, the ability to stream on up to two devices simultaneously, and video quality of up to 1080p, making them suitable for individuals or small households.

For users who prefer a more enhanced viewing experience, Bell also offers premium options such as the **Crave and Netflix – Premium bundle**, priced at approximately **$36 per month**. This plan includes ad-free streaming, the ability to stream on up to four devices at the same time, and support for up to 4K video quality. Additionally, users can download content on multiple devices and enjoy access to live channels where available. These streaming bundles are typically available to existing Bell customers or those subscribing to Bell services and provide a convenient way to manage multiple subscriptions under a single bill. Overall, Bell's streaming bundle options offer flexibility, affordability, and a high-quality entertainment experience tailored to different user needs.

Standalone Streaming Options : Bell also offers standalone streaming options through Crave, allowing customers to subscribe independently without bundling with other services. The **Crave Standard with Ads plan** is priced at approximately **$11.99 per month** and includes ad-supported streaming, the ability to stream on up to two devices simultaneously, and video quality of up to 1080p. This plan is ideal for users seeking an affordable way to access a wide range of content, including popular TV shows, movies, and Crave originals.

For customers looking for a more premium experience, Bell offers the **Crave Premium plan** at approximately **$22 per month**. This plan provides ad-free access to HBO series, the latest blockbuster movies, and exclusive Crave Originals. It also allows streaming on up to four devices at the same time, supports video quality of up to 4K, and enables content downloads on multiple devices for offline viewing. Additionally, users can enjoy live channels and access bonus content where available. These standalone options provide flexibility for customers who prefer to subscribe only to Crave while still enjoying high-quality streaming and a rich entertainment experience.

Why Choose Bell for Streaming : Bell enhances the streaming experience by offering convenience, cost savings, and seamless integration of multiple platforms under one service. One of the key advantages is the ability to save money by bundling popular streaming services such as Crave, Netflix, and Disney+ into a single package at a lower combined monthly cost. This bundled approach allows customers to enjoy premium content while benefiting from discounted pricing compared to subscribing individually.

In addition to cost savings, Bell simplifies the user experience by providing a single, centralized bill for all streaming subscriptions. This eliminates the need to manage multiple payments across different platforms, making it easier for customers to track and control their expenses. Furthermore, Bell ensures a smooth transition for users by allowing them to retain their streaming history, preferences, and watchlists when linking existing accounts. This means customers can continue their viewing experience without interruption while enjoying the added convenience of unified billing and management. Overall, Bell's streaming services offer a user-friendly, cost-effective, and integrated entertainment solution tailored to modern viewing need
